## DETAILED ACTION

Page 2

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 62-85, drawn to an energy absorbing material comprising a carrier and a dilatent material, classified in class 428, subclass 304.4.
  - II. Claims 86-92, drawn to an energy absorbing material comprising a woven or knitted fabric, classified in class 442, subclass 1+.
  - III. Claims 93-96, drawn to a method of making an energy absorbing material comprising a carrier and a dilatent material including the step of impregnating molten dilatent into the carrier, classified in class 427, subclass 366.
  - IV. Claims 97-99, drawn to a method of making an energy absorbing material comprising a carrier and a dilatent material including the step of pouring solvent thinned dilatent onto a carrier, classified in class 427, subclass 366.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Group II and Groups I, III, and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions, the invention of Group II does not have a carrier layer and a dilatent material as required in Groups I, III, and IV. Group II differs from said other groups in that it is drawn to a woven or knitted fabric comprised of a dilatent thread.

Application/Control Number: 10/797,756 Page 3

Art Unit: 1771

3. Inventions of Group III and Group I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product of Group I can be made by the alternative process of Group IV.

- 4. Inventions of Group IV and Group I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product of Group I can be made by the alternative process of Group III.
- 5. Inventions of Group III and Group IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation in that the two groups are alternative methods of producing like products.
- 6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 7. If applicant elects Group I, the following election of species is also required. This application contains claims directed to the following patentably distinct species of carrier materials for the claimed invention:
  - a. spacer fabric,

Application/Control Number: 10/797,756 Page 4

Art Unit: 1771

b. foam,

c. fleece, and

d. core of dilatent material.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, 62, 63, and 73-75 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Application/Control Number: 10/797,756 Page 5

Art Unit: 1771

## Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cheryl Juska whose telephone number is 571-272-1477. The examiner can normally be reached on Monday-Friday 10am-6pm. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Terrel Morris can be reached at 571-272-1478. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

9. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
